Company	Cable Manufacturers
Platform/Technology	COGNOS 8 Series and DB2
Solution/Service	Report Development & Enhancement
Number of Sites	As of now only India & Thailand
Delivery Model	Onsite - Requirement Gathering Offshore – Development, Testing & Preparing the Report Design Document
Project Duration	Jan 2012 to till date

Business Issue

- With the increasing amount of data available to companies, manually tabulating and assessing data is no longer feasible if you want to remain ahead of your competitors.
- The reason many business projects fail is because critical decisions are made without the best and most objective information.

Solution

- With a BI program, you can pull data and create the reports at the click of a button thus freeing up time and resources allowing employees to be more productive on their own tasks.
- BI software can be set up to accumulate and monitor relevant data that's available when you want it.
- BI processes help you monitor past and present performances of nearly all operations, while giving you a solid base with which to make future predictions. Essentially BI helps SMEs make better informed decisions.
